Nexa: Treasury Data & Automation Case Study

Candidate brief

Hello, and thank you for your interest in the Treasury Data & Automation role.

This exercise gives you a realistic look at the kind of work the role involves, and gives us a chance to see how you work. It uses a fictional company, **Nexa**, and entirely synthetic data. You don't need any prior knowledge of our company, systems or banks. Everything you need is in this pack.

We know take-home exercises ask a lot of your personal time. **This one is capped at 8 hours** (see Section 6), and we would rather see thoughtful, well-explained work on part of the scope than rushed work on all of it.

---

1. About Nexa (fictional)

Nexa is a global software-as-a-service (SaaS) company with about 4,000 employees. It sells website and e-commerce subscriptions to small businesses and larger organisations in more than 150 countries, and it collects revenue in more than 15 currencies. Nexa reports in **US dollars (USD)**.

How Nexa gets paid - **Self-serve customers** (the large majority) pay by card. Nexa's payment service providers (PSPs) collect the card payments and send Nexa one net payout per currency, per day or a few times a week. - **Mid-Market and Enterprise customers** get invoices and pay by bank transfer (wire, ACH, SEPA or Faster Payments).

Where Nexa spends Most costs are in USD. However, the parent company, *Nexa Technologies Ltd*, runs Nexa's largest R&D centre, and most of its payroll and local costs are paid in **Israeli shekels (ILS)**. Smaller local cost bases exist in Europe, the UK, Brazil, Mexico, Japan, India, Poland and Australia.

Treasury is a small team. It manages the bank accounts, daily cash, FX conversions and hedging, and works closely with Billing, Accounts Receivable (AR) and Sales Operations.

2. The situation

It is **Monday 13 April 2026**. The Director of Treasury is preparing for two meetings this week: the **Q1 close review** and the **monthly FX hedging committee**. You have been asked to review the six weeks from **2 March to 10 April 2026** and answer three questions:

- **A. Where is our cash, and does it reconcile to what we expected to receive?**
- **B. How much FX exposure do we have, and what should we hedge?**
- **C. How healthy are our collections, and how should we respond to the open requests in the AR mailbox?**

The Director is financially literate but not technical. Your written outputs should work for that reader. Your code and methods should work for a technical reviewer.

3. Data provided

All files are in the `data/` folder. They are raw exports: handle them as you would real operational data.

File	What it is	Key notes
`daily_bank_report.csv`	Transaction-level bank report for Nexa's main collection and operating accounts, 2 Mar to 10 Apr 2026	Dates are **MM/DD/YYYY**. Amounts are signed (+ inflow / − outflow). Running Balance is per account and currency. Account ****2290 is a multi-currency account (PLN, SEK and CHF).
`expected_collections.csv`	What Nexa expected to receive: open customer invoices plus expected PSP payouts	Includes invoices that were still open on 1 Mar 2026 and invoices issued up to 10 Apr 2026. `expected_value_date` is the due date moved to the next weekday if needed. `service_period_start` is the date billing should have started.
`fx_rates.csv`	Daily mid-market spot rate and forward points against USD for 12 currencies	Check `quote_convention`: EUR, GBP and AUD are quoted as USD per 1 unit; all others as units per 1 USD. **Forward rate = spot + (forward points × pip_size).**
`subscription_collections_by_currency.csv`	Monthly group-wide collections, refunds and local cost payments by currency: actuals Apr 2025 to Mar 2026, forecast Apr to Sep 2026	All amounts are in **thousands of local currency**. `existing_fwd_hedges_sold` is the notional of forwards already in place (Nexa sells the currency forward).
`client_invoice_emails.txt`	Six emails from the AR mailbox, forwarded to Treasury	Treat them as real requests that need a decision.

Bank accounts in the report

Account	Entity	Bank	Currency	Primary use
****1021	Nexa Inc	Arcturus Global Bank	USD	Collections (PSP payouts and customer receipts)
****1038	Nexa Inc	Arcturus Global Bank	USD	Operating and concentration account
****2210	Nexa Europe B.V.	Arcturus Global Bank	EUR	Collections
****2290	Nexa Europe B.V.	Arcturus Global Bank	PLN / SEK / CHF	Collections (multi-currency)
****3307	Nexa UK Ltd	Arcturus Global Bank	GBP	Collections
****4410	Nexa Canada Inc	Arcturus Global Bank	CAD	Collections
****5122	Nexa Brasil Ltda	Banco Ipanova	BRL	Collections
****5560	Nexa Mexico S. de R.L.	Banco Nopalera	MXN	Collections
****6034	Nexa Japan K.K.	Kaiun Pacific Bank	JPY	Collections
****6612	Nexa India Pvt Ltd	Arcturus Global Bank	INR	Collections
****7019	Nexa Australia Pty Ltd	Arcturus Global Bank	AUD	Collections
****8840	Nexa Technologies Ltd	Levanta Bank	ILS	Payroll and local operating costs
****8855	Nexa Technologies Ltd	Levanta Bank	USD	Funding account for ILS conversions

All company, bank, payment provider, customer and people names in this exercise are fictional. Any resemblance to real organisations or people is coincidental.

4. Your tasks

Part A: Cash position and reconciliation

1. Load and prepare the bank report. Tell us what you had to fix or decide along the way.
2. Report Nexa's cash position by account and currency, in local currency and USD, **as of 31 March 2026 and 10 April 2026**. State clearly which date basis you used and why.
3. Reconcile actual receipts against `expected_collections.csv`. Classify items as matched, timing differences, or exceptions that need follow-up. For each exception, say who should follow up and what the next step is.

Part B: FX exposure and hedging

1. Calculate Nexa's forecast **net** exposure by currency for April to September 2026, in local currency and USD, taking existing hedges into account.
2. Recommend a hedging action for each material currency: hedge or not, spot or forward, how much (% coverage) and over what horizon. Show the cost or benefit of hedging with forwards versus converting at spot, using the forward points. Stay within the policy in Appendix B, or explain why you would propose an exception.
3. Tell us what would make you change your recommendation.

You don't need advanced derivatives knowledge. We are looking for clear, sound logic.

Part C: Collections and AR process

1. Build an **AR aging** as of 10 April 2026, by aging bucket, with a view by currency or segment and the largest overdue items.
2. Give a short **process-efficiency view**. For example: how quickly invoices are issued, unapplied cash, and customer payment behaviour. Choose the metrics you think matter most.
3. For **each of the six emails**, give a recommended response (approve, decline, escalate, or request more information), who should act on it, and why. Use the policy in Appendix A where relevant.

5. What to submit

#	Deliverable	Notes
a	**Dashboard**	Any tool, as long as a non-technical reviewer can view it without installing anything special. For example: a well-formatted Excel workbook, a hosted link, or a live file plus screenshots. It must cover **cash position, reconciliation status, FX exposure by currency, and AR aging**.
b	**Memo** (max 3 pages)	Findings and recommendations for Parts A, B and C. Point to your technical appendix where relevant, e.g. "see Appendix, script 02".
c	**Executive summary** (1 page, mandatory)	"Explain it to a non-technical executive." Plain business language, no jargon, no code. **This is the first thing the Director reads.**
d	**Reasoning log**	Short written answers to the four fixed questions below.
e	**AI usage disclosure**	See below.
f	**Technical appendix**	All code, SQL, scripts, notebooks or formulas, with a short README on how to run them. It won't be read by the Director but will be reviewed by a technical colleague.

Reasoning log: please answer each question 1. What did you check first, and why? 2. List every anomaly you found. For each one: how confident are you that it is a real issue rather than noise, and what would you double-check with a person before acting? 3. Was there any instruction in the materials that you chose not to follow as given? Why? 4. What is the one thing in this dataset you are still unsure about?

AI usage disclosure AI development tools such as Claude Code, Cursor, Copilot, Codex and ChatGPT are part of how this team works every day. Using them well is expected and valued. Please tell us: - which AI tools you used, and for which parts of the work; - 2 or 3 example prompts you used; - specifically what you **changed, rejected or fact-checked** in the AI's output, and how.

If you didn't use AI tools, just say so.

6. Timing and logistics

- **Deadline:** please submit by the deadline given in your invitation email.
- **Time cap: 8 hours of work.** We value your time. This exercise is capped at 8 hours, so please stop at 8 hours even if you haven't finished, and note what you would have done with more time. Please tell us roughly how many hours you actually spent (at the top of your reasoning log). Finishing early is fine.

- **Questions:** you are welcome to email Shlomi at **shlomif@wix.com** with clarifying questions. If something is ambiguous, make a reasonable assumption, write it down, and keep going. Documented assumptions are a normal part of the work.
- **Next step:** if we move forward, we'll hold a 30 to 45 minute conversation where you walk us through your work and we discuss your choices.

Appendix A: Nexa Credit & Collections Policy

1. **Standard payment terms** are Net 30 from the invoice date. Enterprise contracts may carry Net 45 or Net 60 where agreed in the signed contract.
2. **Invoice dating.** Invoices are issued on or after the billing trigger date (service period start) and carry their actual issue date.
3. **Payment term extensions** - (a) A one-time extension of up to 30 days on a single invoice may be approved by the **Collections Lead**, provided the customer has no other invoices more than 30 days past due. - (b) Any extension of more than 30 days, any extension covering multiple invoices or customers, and any change to standard terms needs **written approval from the Director of Treasury**.
4. **Late fees.** For Enterprise contracts, a late fee applies to overdue balances as set out in the contract. Only the Collections Lead may waive it, and only after the invoice is paid in full.
5. **Bank details.** Treasury maintains Nexa's bank accounts and receiving bank details. Billing and Sales teams do not issue or change bank details.

Appendix B: Nexa FX Risk Management Policy

1. **Objective.** Reduce the effect of FX movements on Nexa's USD cash flows over the next six months. Hedging is not used to speculate.
2. **What we hedge.** Forecast **net** cash-flow exposure per currency: collections, less refunds and chargebacks, less local-currency cost payments. Currencies with forecast average net exposure below **USD 1.0 million equivalent per month** are not hedged. They are converted at spot as needed.
3. **Hedge ratios** (as a % of forecast net exposure, including hedges already in place): - Months 1 to 3: **50% to 80%** - Months 4 to 6: **25% to 50%**
4. **Instruments.** FX spot and deliverable forwards up to six months. Non-deliverable forwards (NDFs) for currencies with capital controls need approval from the Director of Treasury. Options are not used.
5. **Counterparties.** Approved relationship banks only.
6. **Governance.** The hedging committee meets monthly. Recommendations are presented in USD.

Confidentiality & Ownership

This exercise, including all data, scenarios, and materials provided, is entirely fictional and was created solely to evaluate your skills as part of our hiring process. Please do not share, publish, or reuse these materials outside this process. Any work you submit (analysis, code, dashboards, written materials) will be reviewed solely for hiring evaluation, and we will treat it as confidential in turn. Submitting your work does not give us any ongoing right to use it beyond this evaluation, and we will not use your submission for any commercial purpose. If you have any questions about this, please contact Shlomi at shlomif@wix.com before you start the exercise.

Submission instructions

1. Put everything in a single `.zip` file named `Firstname_Lastname_Nexa_Case.zip`, organised as: `01_Executive_Summary (PDF or DOCX) 02_Memo (PDF or DOCX) 03_Dashboard (workbook / file + screenshots, or a text file with the link) 04_Reasoning_Log (PDF, DOCX or MD, with hours spent at the top) 05_AI_Usage_Disclosure (PDF, DOCX or MD) 06_Technical_Appendix (code / SQL / notebooks + README)`
2. If your dashboard is hosted, make sure the link works without a login, or send access details separately.
3. Email the zip (or a file-share link) to **Shai Ayalon at shaiay@wix.com** by your deadline.
4. You'll get a confirmation within one business day.

Good luck, and enjoy it. We're looking forward to seeing how you think.
